Secure, specialist delivery; on-time for medical professionals

Safe, Secure, Direct Delivery

Secure delivery is fundamental to all of CitySprint's services. To ensure the integrity of each sample is maintained, CitySprint provides the latest collection and earliest delivery times. This is possible because we do not operate hub and spoke systems. Instead the sample is individually delivered 'by hand' to its destination. Each international delivery is shipped using a direct flight and once cleared through customs is immediately delivered to its destination. In the event of a delay dry-ice top ups are carried out.

- A complete one-stop service provision;
- Direct door-to-door service;
- Full clinical trial support through Phase I/II/III/IV;
- Highly experienced in handling GMM/GMO, infectious, perishable, radioactive and vulnerable shipments;
- Provision of dry-ice, other refrigerants and packing materials;
- Web based booking and tracking;
- Advice on sourcing and completion of customs paper work and import licences when required;

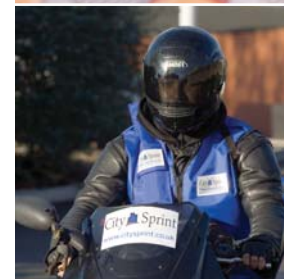

- Pick up and delivery to over 200 countries worldwide;
- Operational 24 hours a day, 7 days a week, 365 days a year;
- Dedicated account management team.

Sample Collection

CitySprint's medical team are fully IATA/ICAO/ADR trained and experienced in the handling and delivery of all types of shipments including, GMM, GMO, infectious samples, hazardous goods, toxic, chemical and radioactive materials.

NHS and University Support

CitySprint is a leading supplier within the UK to the network of NHS and University labs who are undertaking biological and pharmaceutical research. Our dedicated approach to providing individual customer service, attention to detail and competitive pricing has proved invaluable to many leading research labs, including those within the MRC, Wellcome Trust, Cancer Research UK and NHS.

“Worldwide, time critical delivery; CitySprint is an essential partner to the global clinical research and pharmaceutical industry...”

Medical and Pharmaceutical

This service combines extensive knowledge and experience within the clinical research environment, providing up to date advice on the classification of biological and hazardous material, planning the fastest route to suit your budget, delivering bespoke packing and temperature controlled solutions (dry-ice, liquid nitrogen, refrigerated cool packs) offering efficient, effective transportation solutions for all your needs, within the UK and to over 200 countries worldwide.

Complete Phase I/II/III/IV Clinical Trial Support

CitySprint is highly experienced in providing unrivalled support for clinical trial and research projects on a global scale.

Specific service elements include:

- Clinical trial start-up;
- Logistics planning;
- Storage of clinical trial kits;
- Provision of dry-ice/frozen gel packs;
- Collection of patient samples/data;
- Sample collection within specific time frames.

Shipping samples in dry-ice

CitySprint specialises in the movement of samples packed in dry-ice to North America and to over 200 countries worldwide.

Packing and Temperature Control

CitySprint is able to provide a complete packing solution tailored to the precise transportation needs of each individual case. From urgent tissue for transplant to biological samples containing pathogens our service is designed to meet your exact needs.

A highly experienced, dedicated account manager is assigned to each customer. They will be on hand 24/7 to provide support, advice and consultation with regards to IATA packing instructions, local country Import or Export licences, customs documentation and Dangerous Goods Shippers Declarations.

“Can you collect 6 samples of Human DNA in dry-ice to be shipped to the US for delivery within 2 days?”

“Yes”

CitySprint's specialist Medical and Pharmaceutical service provides flexible, end-to-end delivery for the transportation of biological, medical and pharmaceutical products – worldwide
